Aruba Products Multiple Vulnerabilities

Severity Level: **MEDIUM**

System / Technologies affected

- AOS-CX 10.17.xxxx: 10.17.0001 and below
- AOS-CX 10.16.xxxx: 10.16.1020 and below
- AOS-CX 10.13.xxxx: 10.13.1160 and below
- AOS-CX 10.10.xxxx: 10.10.1170 and below

Overview

HPE Aruba Networking has released AOS-CX software patches to address multiple security vulnerabilities.

Description

The identified vulnerabilities include:

- CVE-2026-23813 - A vulnerability has been identified in the web-based management interface of AOS-CX switches that could potentially allow an unauthenticated remote actor to circumvent existing authentication controls. In some cases, this could enable resetting the admin password.
- CVE-2026-23814 - A vulnerability in the command parameters of a certain AOS-CX CLI command could allow a low-privilege authenticated remote attacker to inject malicious commands resulting in unwanted behaviour.
- CVE-2026-23815 - A vulnerability in a custom binary used in AOS-CX Switches' CLI could allow an authenticated remote attacker with high privileges to perform command injection. Successful exploitation could allow an attacker to execute unauthorized commands.
- CVE-2026-23816 - A vulnerability in the command line interface of AOS-CX Switches could allow an authenticated remote attacker to execute arbitrary commands on the underlying operating system
- CVE-2026-23817 - A vulnerability in the web-based management interface of AOS-CX Switches could allow an unauthenticated remote attacker to redirect users to an arbitrary URL.

REF NO : CERT-NCSOC-0238

Impact

- Remote Code Execution
- Security Restriction Bypass

Solution/ Workarounds

Before installation of the software, please visit the vendor's website for more details.

Apply fixes issued by the vendor:

- https://support.hpe.com/hpesc/public/docDisplay?docId=hpesbnw05027en_us&docLocale=en_US
